# **SHOOT LISTER**

## ***Abstract:***

Now a days a number of films are produced in every day. Even though the technologies grow older there is no effective mechanism for scheduling the shoots, production and artist for each day. “SHOOT LISTER” is a responsive web application with the help of industrial technologies like HTML-5, PHP, JavaScript etc. IN this system there is an effective mechanism for shoots, production, artist scheduling, hardware requirements of film and music sessions. This application helps film production company for scheduling films undertaken by them. It includes script with scene number, shooting schedule order, crew list, cast list, call sheets for all days of production.

## ***Types of users and their functions:***

### **1. Administrator:**

Admin have the over all control of the system. He can approve the registration of other users such as production controller, director, producer, artists, musicians and technicians. The registering users should include their area of specialization, experience and expected payment. Admin can also update and delete the registered users.

### **2. Production controller**

Production controller can add, update shoot script according to the scene details. He can also manage artist and their scheduling details. He can view the scheduled location, artist details and completed works. Production controller can also notify the technical requirements to the technicians and view the responses. He can also view the musical section's information and can schedule the shoot according to the completion of musical sections.

### **3. Artist:**

Artist can view days allotted to him for shooting. He can view the list of scenes completed by him and scenes remaining. Also he can view scene by scene dialogues allotted to him for each days.

4. Director:

Director can view everything added by the production controller and can update some data. They also get the scheduled list of artists.

5. Producer:

Producer will get the daily expenditure details and scheduling list according to its status like completed or uncompleted tasks.

6. musicians:

Music directors can add, update and delete the recordings they have done. The registered singers can receive notification from music directors for auditions. Singers can respond to the notifications. Music directors can also notify other musicians who handle the instruments. Music director should add the complete details of all musicians who have been selected through audition.

7. technicians:

Technical section of the system includes different categories such as camera, light etc. production controller can notify the coming location schedule and requirements to the technical crew in a weekly manner. Technicians can respond to the requirements.

## ***Advantages:***

1. Plan shooting schedules for scripted drama, commercial shoots, radio production or motion capture.
2. Add, edit, delete or re-order your scenes.
3. Never miss vital scenes (to do, delay, cut, done)
4. Keep every one informed of last-minute changes.
5. Reduce paper works.
